# INTRODUCTION

Please do find the details **Product Thinking Plan** where I provided a opportunity discovery for a specific problem that persists in healthcare industries, and procure a step by step action plan for the problem solution, product application, Value Proposition Canvas, problem solutions and results.

# PROBLEM STATEMENT

Chronic patients (e.g., diabetes, hypertension, heart failure) often experience poor health outcomes due to fragmented care, irregular monitoring, and lack of personalized interventions outside the hospital environment.

# PROVE IT IS REAL

## Chronic Disease Management: Unveiling the Gaps in Care.

Made with Napkin

### 1. Market Research & Stats:

70% of healthcare spending goes to chronic disease management.

50% of chronic patients do not adhere to medication or follow-up.

### 2. Patient Interviews:

"I forget when to take medication."

"I only see my doctor once every 3 months.  
No one checks on me in-between."

### 3. Clinician Interviews:

"We lack real-time patient updates."

"Patients deteriorate before they reach us."

**Conclusion:** There's a real gap in continuity of care and remote intervention in chronic disease management.

# PRODUCT THINKING APPLICATION

## Smart Chronic Companion App - Product Thinking

### Target Audience

### Chronic Care Patients

Age 35+

AI-driven nudges

Personalized reminders

Fits daily routines

### Caregivers & Family

Support patient adherence

Alerts on non-compliance

Alerts for non-compliance

Early warnings prevent issues

### Outpatient Clinicians

Remote care teams

Back-end dashboards

Secure chat feature

Real-time insights provided

### Solution Vision

### Key Features

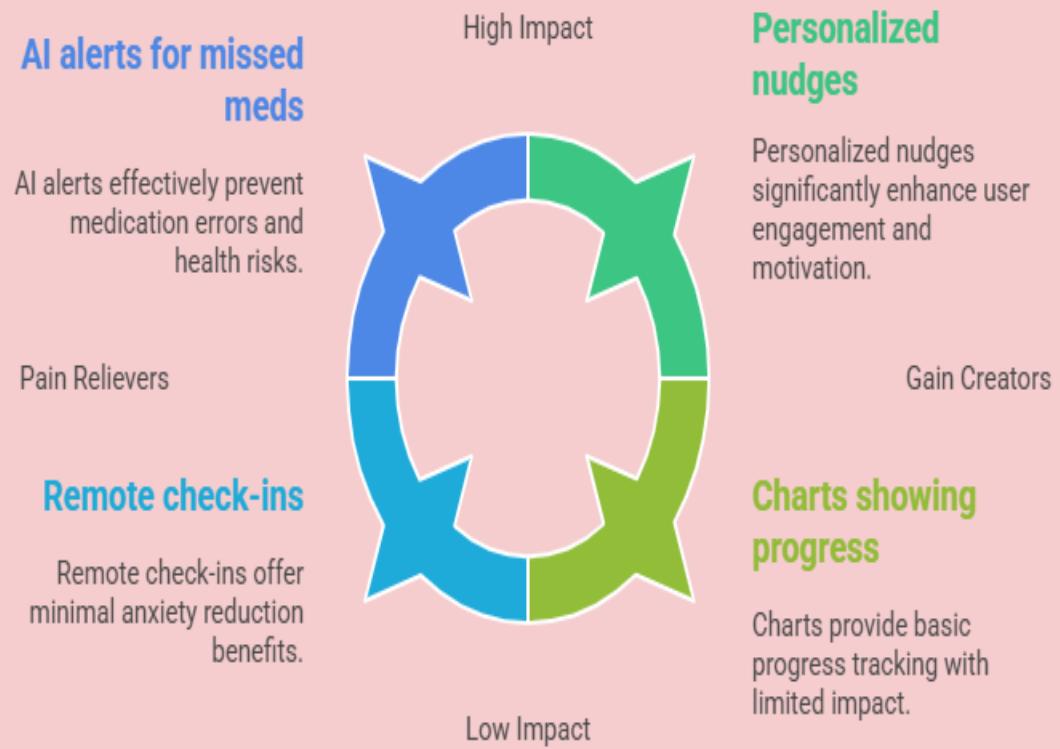

### Why It Works

# VALUE PROPOSITION CANVAS

**Customer needs range from basic to aspirational.**

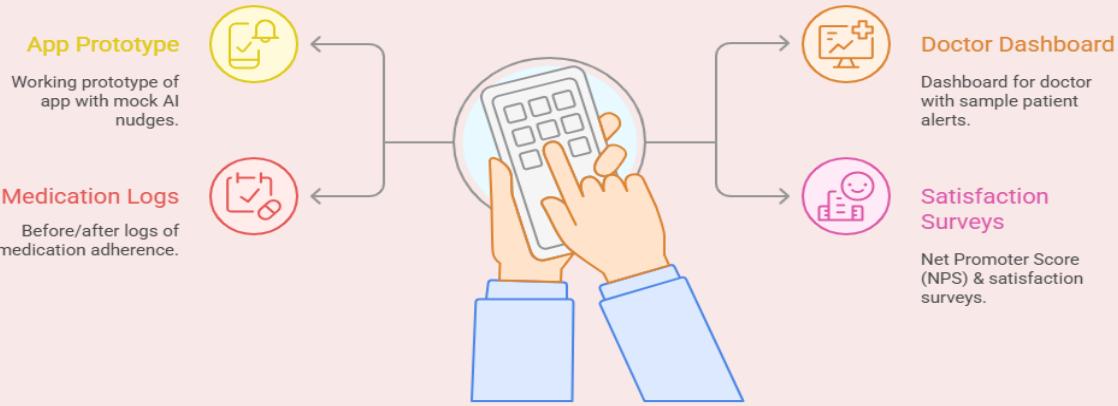

## AI Product Features Categorization

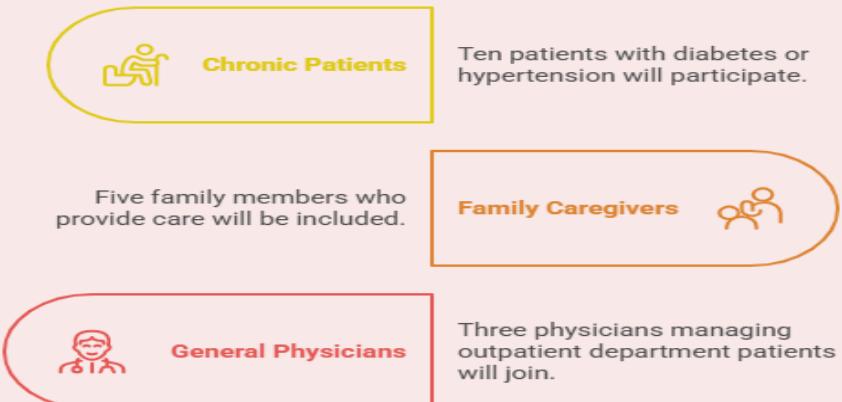

# PROBLEM SOLUTION FIT

## Component Details to Monitor

## Test Participants

## Success Criteria for Healthcare System

### Patient Reminders

Patients find reminders helpful

### Doctor Alerts

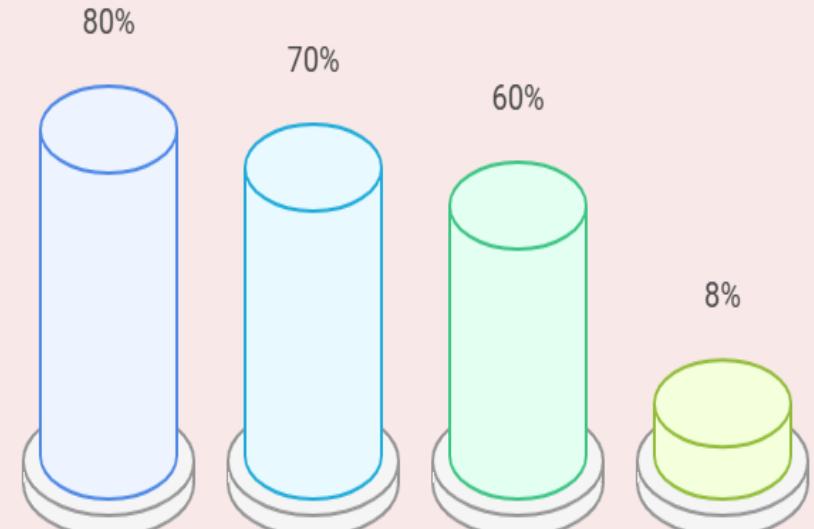

Doctors see alerts as relevant

### Medication Adherence

Improvement in medication adherence

### NPS Score

High satisfaction with ease of use

# PRODUCT PILOT ROAD MAP

## Project Development Timeline for Healthcare Innovation

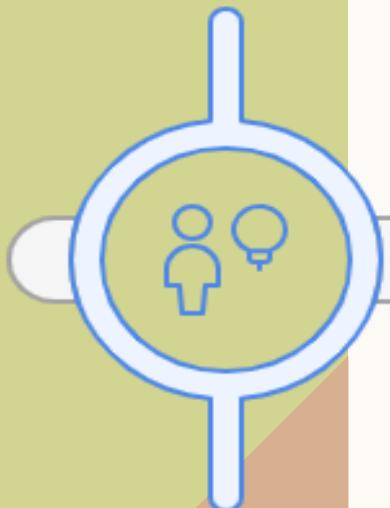

Week 1–2

Week 3–5

Week 6–8

Week 9–10

Week 11–12

Ideation & Research:  
Problem validation,  
journey mapping

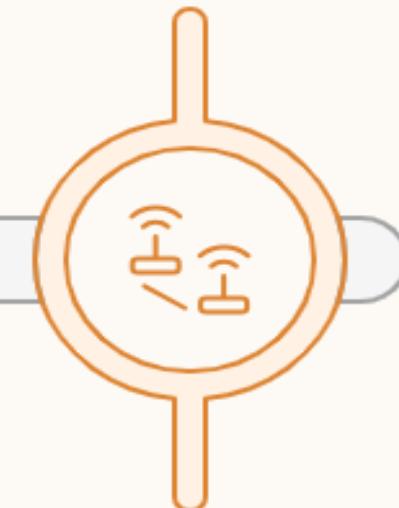

MVP Design: Build  
patient app & doctor  
dashboard

Testing: Usability  
tests, satisfaction,  
adherence logs

Iteration: Refine  
based on feedback

Pilot Launch: Test  
with 50 users in a  
real-world setup
